# Topics

---

- **Need for electronic Healthcare Information Exchange**
- **Role of Healthcare Standards and benefits**
- **What is HL7 and examples of standards**

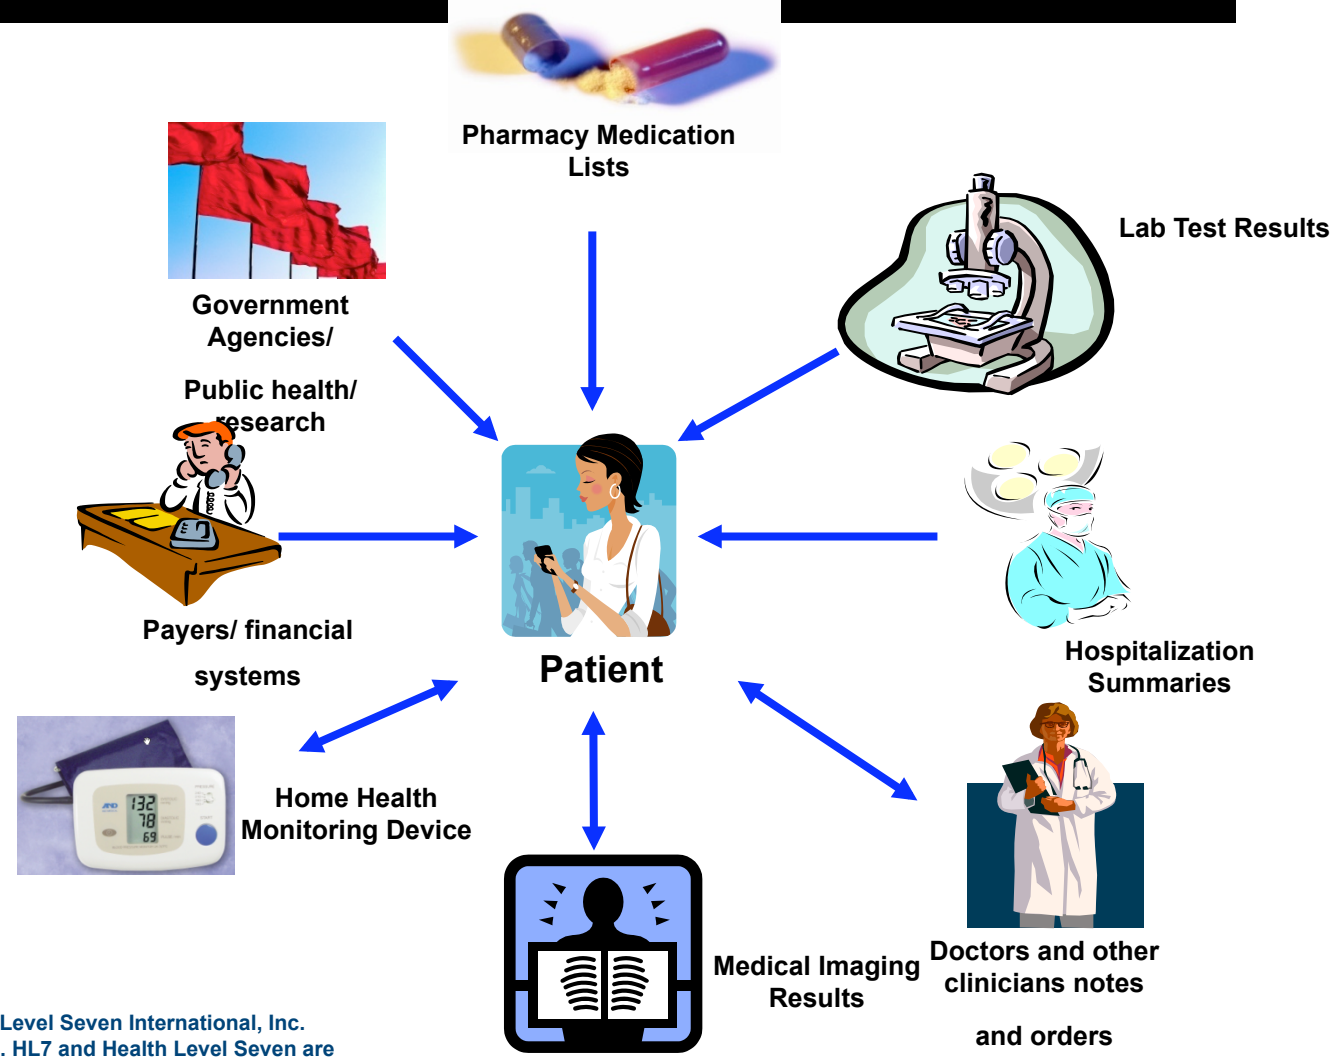

# Global Healthcare Trends

- **Rising cost of healthcare**
  - Under or not insured
  - Aging population
  - High cost of chronic care
  - Demand on public health hospitals
  - System and organizational inefficiencies
- **Paper to Electronic Records**
  - Better clinical outcomes
  - Cost effective
- **Public Health**
  - Prevention efforts
  - Bioterrorism and pandemic events: Anthrax, Avian Flu, TB, etc
- **Consumer Empowered**
  - Patients and providers seeking greater access and control over information
  - Personal Health Records empower a consumer to manage their own health
- **National-Regional IT Networks**
  - Canada, Finland, Denmark, Austria, USA, UK, Australia
  - Government select Healthcare Standards
  - Emerging government-sponsored conformance testing
- **Biotech Era**
  - Personalized medicine is beginning to emerge, e.g. genomic data and test for cancer drug

# Many types of healthcare information need to be exchanged

# Healthcare Information Exchange Challenges

- **Across Healthcare Institutions and others groups needing HC data (insurance, public health, research) :**
  - How can clinical data be shared among different healthcare enterprises using different technology?
  - **How can the same patient be identified across different institutions?**
  - **How can data exchange be secured and access to patient data be monitored?**
- **Within Healthcare Institutions:**
  - How can patient's clinical data from different sources (lab, pharmacy, clinician notes, etc) be brought to patient's point of care and into an electronic medical record?

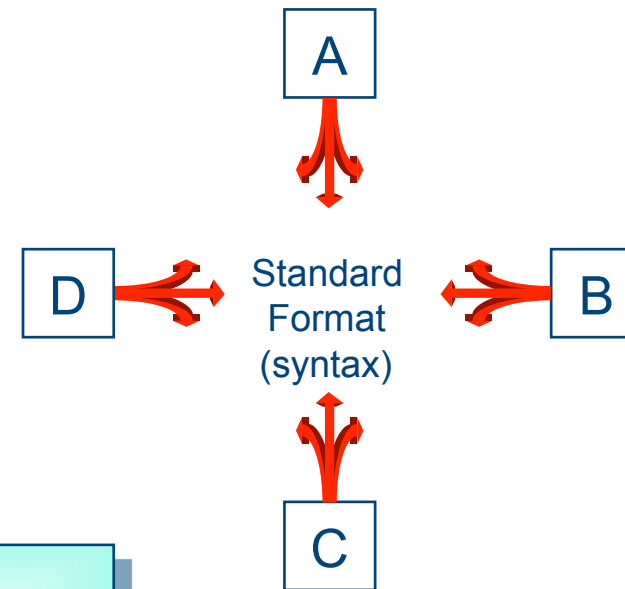

# Standards = Common exchange format

## Before – Custom Interface

## After Standards

Hospital uses standard format  
Document, message or service)

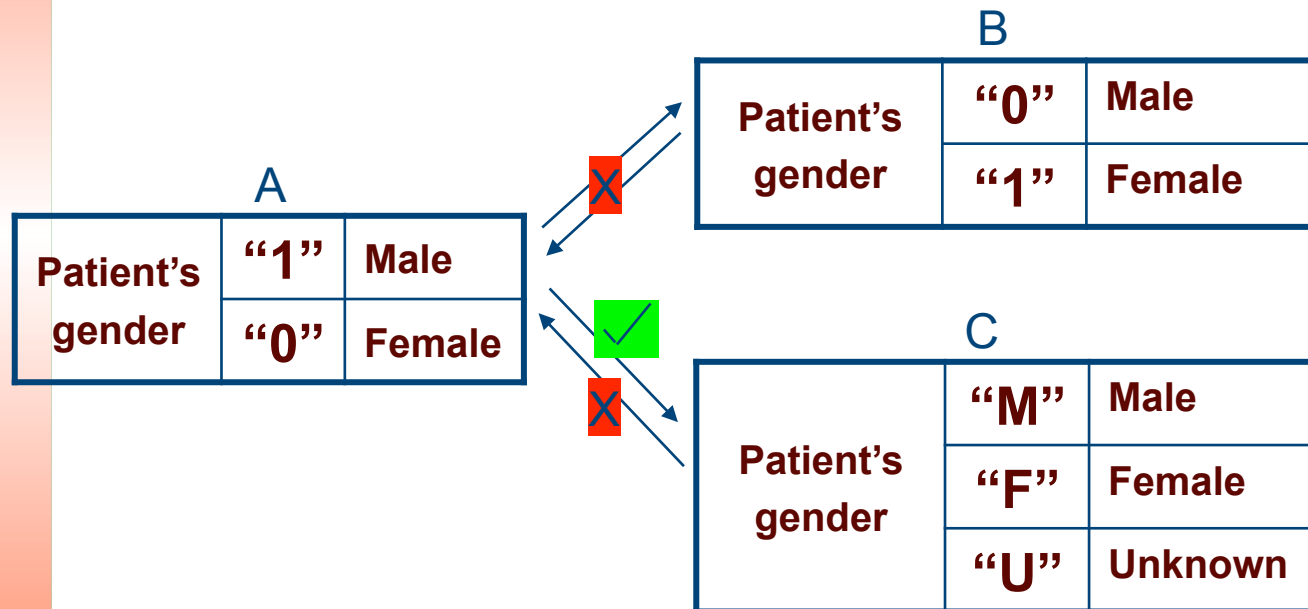

- Standards
- Common denominator
  - Saves time and money
  - Enables interoperability
  - Industry effort

# Need common Coding Systems and Vocabularies – for common understanding

Examples of different systems trying to interoperate.

A and B differ syntactically and cannot interoperate without translation.

A and C differ semantically.  
A cannot represent the concept, "Unknown".

# Standards drive good business for Healthcare IT vendors and service providers

- **Speed of development, faster time to market.**
- **Lower development cost, lower installation costs, over customized interfaces.**
- **Overall, enhanced interoperability of product.**
- **Clients prefer the flexibility of products with standardized interfaces therefore a sales advantage in using standards.**
- **More scalable solution.**
- **Standards = International community best practices.**

# HL7: Health Level Seven International

- Creates healthcare IT standards widely used around the world.

# HL7 Interoperability goals

---

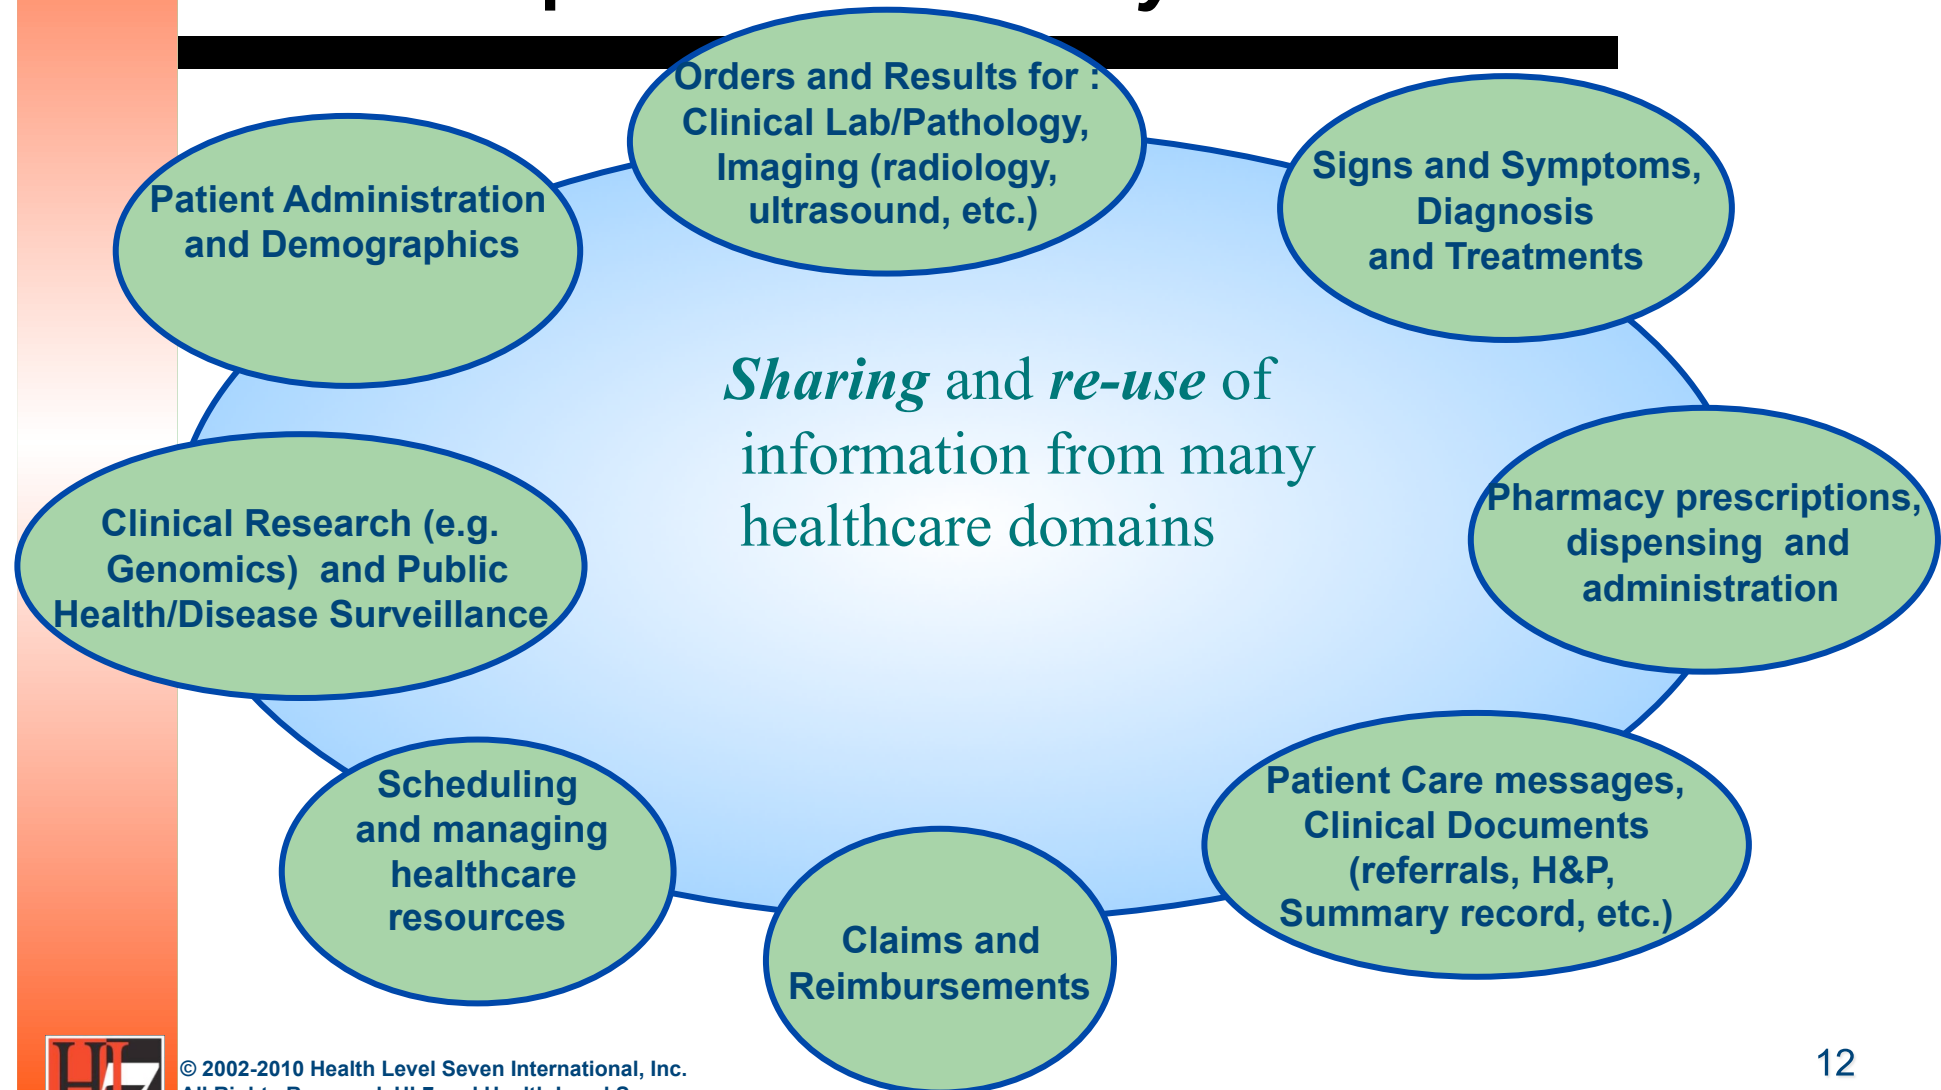

- **HL7 Mission: committed to advanced standards for interoperability in healthcare**
- **HL7 has created a family of standards that enable interoperability of healthcare information via:**
  - **The exchange of electronic messages**
  - **The use of (web-) services**
  - **The process of sharing documents**
- **Standards and Implementation Guides built on Standards**

# Examples of HL7 scope and programs

# HL7 has produced a *family of Standards* for

# HL7 Messages and Documents

## Messages

- A message is event driven and includes workflow.

- A fragment of information

## Documents

- The Clinical Document Architecture (CDA) can facilitate clinical document exchange within and between medical institutions.
- CDA can be used to bring patient's clinical documents into a patient-centric EHR.
- A collection of information about an encounter
- Can be digitally signed

# Conclusion: HL7 Healthcare standards

---

- **Enabling the sharing and re-use of *healthcare information*, especially**
  - **Clinical information**  
*And healthcare-related information, including*
  - **research, clinical trials, administrative, financial, resource utilization, public health, supply chain**
- **All based on the sharing and re-use of Healthcare information**
  - **Using Messaging, Clinical Documents, and Services**
  - **Providing Functional Models to ensure interaction**

# Summary

---

- **Need for computable healthcare information**
- **Standards are critical for exchanging electronic healthcare information**
- **HL7 is the key organization for producing relevant global healthcare information standards**
